

Masons Air-Flex

ADVANTAGES

- All types of sand
- Excellent workability
- Longer board life
- User friendly
- Non-toxic
- Cost effective
- Low dosage
- Sturdy plastic container
- Provides good bond strength

MASONS Air-Flex is a plasticizer that has been manufactured especially for use by brick and blocklayers. The scientific formulation of MASONS Air-Flex provides the tradesman with a safe, low dosage, and extremely economical mortar plasticizer.

USES

When using MASONS Air-Flex as a mortar additive no additional admixtures are required. The product performs well regardless of the cement and sand types used.

Available in 700gm / 1.7kg / 4kg / 10kg / 15 kg sizes

Masons Drive & Paving Seal

ADVANTAGES

Hard Film: When fully cured the finish is designed to resist scratching and the abrasive effect of car tyres.

UV Stability: Acrylic polymers have long term resistance to UV degradation although any organic pigment in the underlying colour will fade.

Clean-Ability: Treated areas are easy to maintain as the micro-pore structure of the concrete/paving has been sealed, minimising dirt pickup and retention.

MASONS Drive and Paving Seal is a clear solution acrylic that protects and highlights the colour and texture of the underlying concrete surface. It has been developed primarily as a driveway and paving finish with particular emphasis on the exposed aggregate and decorative concrete finishes

USES

Designed for vehicle traffic and domestic driveways, outdoor entertainment areas and commercial applications such as building forecourts and car parks. MASONS Drive and Paving Seal may also be used on cobblestone, bluestone, concrete and imitation slate surfaces as well as other high traffic surfaces requiring protection.

Masons Keying agent

ADVANTAGES

- Can be used for new work or repair work
- No surface chipping to obtain a bond
- Will adhere to most sound surfaces
- Resists trace acids and alkali
- Faster application of screeds and renders
- Not suitable when continual water

MASONS Keying Agent is a general purpose bonding agent for mortar, plaster, floor toppings and concrete.

USES

MASONS Keying Agent is used for bonding mortar, plaster, floor toppings and concrete and renders to brick, and concrete masonry without any need to hack the surface to obtain a bond. Can be used on new or old surfaces.

MASONS Keying Agent can also be added to the mixing water to improve resistance to trace acids and alkali, as well as reducing surface dusting.

Masons Masonry Sealer

ADVANTAGES

- Does not alter the colour or visual appearance of the treated surface
- The water repelling properties facilitate ease of cleaning and impart non-staining characteristics by hindering penetration of stain inducing materials. Imparts non-slip properties
- Non-yellowing and UV resistant
- Allows concrete to breath

MASONS Masonry Sealer is an oligameric siloxane modified silicone resin based non-film forming clear sealer, formulated for cement and clay based products. It's Unique penetrating properties are designed to provide excellent water repellency without appreciably changing the surface appearance of the treated area giving minimal visual effect.

USES

MASONS Masonry Sealer, is formulated for optimum exterior performance and can be used on all mineral – based interior and exterior building products including, concrete walls and driveways, plaster and mortar finishes, stone and marble floor and wall tiles and cement fibre boards. Designed for vertical application and also suitable for vehicle traffic

Masons Splash & Dash

ADVANTAGES

- Easy to use
- Unlimited Shelf life

MASONS Splash and Dash is a specially formulated product containing biodegradable surfactants, for removing mosses, grime and mould from any surface without involving hard scrubbing, the weather does the work in conjunction with the product.

USES:

Masons Splash & Dash will clean concrete, paving tiles, decks, and driveways of any winter mould and mildew.

Masons Waterproof Agent

ADVANTAGES

- Easy to use
- Durable and long lasting
- Enhances the waterproofing properties of cement
- Does not affect normal cement properties
- 99% Waterproof

MASONS Waterproofing Agent is used to improve the waterproofing properties of cement mortars, plaster/render and concrete.

USES

MASONS Waterproofing Agent will drastically reduce the transference of moisture through most cement mixes. May be used in any situation where a degree of waterproofing is required in concrete or mortar.

Masons Masonry Bond

ADVANTAGES

- Provides excellent adhesion to concrete, masonry plaster, fibre-cement board and most surfaces
- The specific formulation allows thin coatings to be applied in the application of floor toppings, concrete, mortar etc.
- Greatly improves tensile, compressive and flexural properties allowing thin section application of concrete, mortar, floor toppings, etc
- Excellent bonding is achieved within hours of completion.

MASONS Masonry Bond is an acrylic latex cement modifier and bonding agent for concrete, mortar, plaster, repairs, floor toppings, etc

USES

For improving and bonding floor toppings, plasters and mortars, repairs of worn, damaged or spalled concrete, floor screeds and toppings and concrete repair systems. Ideal for use in outside applications subject to continual presence of water.

Masons Masonry Plus

ADVANTAGES

- Faster application
- Reduces cracking
- Increases bond strength
- Easier working
- Greater plasticity
- Eliminates need for lime
- Cleaner work, less droppings
- Easier ruling off
- Cuts costs - increases productivity reduces water absorption
- Helps prevent efflorescence
- Resists Freeze - thaw damage

MASONS Masonry Plus is a highly concentrated plasticizing liquid for use with cement mortars and renders.

USES

A very active non-staining liquid which readily mixes with water to improve the workability and adhesion of cement mortar and plaster. Eliminates the need for hydrated lime, but can be used with lime if necessary. A great masonry aid for laying bricks, concrete blocks and stone. An important additive for solid plastering.
