

MASONS

Masonry Plus

MASONS Masonry Plus is a highly concentrated plasticizing liquid for use with cement mortars and renders.

USES:

A very active non-staining liquid which readily mixes with water to improve the workability and adhesion of cement mortar and plaster. Eliminates the need for hydrated lime, but can be used with lime if necessary. A great masonry aid for laying bricks, concrete blocks and stone. An important additive for solid plastering.

ADVANTAGES:

- Faster application.
- Reduces cracking.
- Increases bond strength.
- Easier working.
- Greater plasticity.
- Eliminates need for lime.
- Cleaner work, less droppings.
- Easier ruling off.
- Cuts costs - increases productivity.
- Reduces water absorption.
- Helps prevent efflorescence.
- Resists Freeze - thaw damage.
- Economical

APPLICATION:

For mortar: Stir up contents before using. For normal soft sand add up to 80 milli-litres of MASONS Masonry Plus per 40kg bag of cement. For harsh, sharp or gritty sand up to a maximum of 120 millilitres per 40 kg bag of cement may be required. It is important not to use too much MASONS Masonry Plus as this will cause over ventilation, which will weaken the mortar.

For cement: Mix the sand and cement in the desired amounts. Add MASONS Masonry Plus to the mixing water proportionate to the above dosage and add to the mixing bowl. The more the mix is worked, the thicker it becomes. Accurate measuring is essential. It is recommended to use less rather than more.
